

What is claimed is:

1. An interlabial pad, comprising:

an absorbent body in capable of absorbing body liquid, said absorbent body being enclosed in the interlabial pad;

5        a size capable of pinching thereof between labia naturally, and  
       a shape including a longitudinal axis direction and a lateral axis direction,  
       wherein a pair of fingertip insert openings having a size such that  
 fingertips of a wearer are inserted naturally are provided in said interlabial pad,  
 and

10        said pair of fingertip insert openings are provided at a line symmetry  
 position on both opposite sides of said interlabial pad with a center axis being  
 said longitudinal axis direction,

      whereby in using the pad, each fingertip of two fingers of the wearer is  
 inserted into said pair of fingertip insert openings respectively, and the interlabial  
 15    pad is subject to use in a condition of being folded at a symmetric axis of said  
 line symmetry.

      2. An interlabial pad according to claim 1, wherein a size of the width of the  
 fingertip insert opening is not less than 20mm.

20        3. An interlabial pad according to claim 1 or 2, wherein a size of the depth  
 of said fingertip insert opening is not less than 15mm.

      4. An interlabial pad according to claim 1 or 2, further comprising a sheet  
 body being attached to an opposite side of said interlabial pad to a body side,  
 said sheet body is attached to have a pair of unbonded portions on left and right  
 side edge portions in respect of said longitudinal direction of said interlabial pad,  
 25    and said pair of fingertip insert openings are formed by said pair of disconnect  
 portions.

      5. An interlabial pad according to claim 4, wherein said sheet body has a

size not less than 80% in respect of a length size of the lateral direction of the interlabial pad.

5 6. An interlabial pad according to claim 4, wherein said sheet body has color, chromaticity and pattern different from those of the opposite side of the interlabial pad to the body side.

7. An interlabial pad according to claim 1 or 2, wherein the interlabial pad or the absorbent body enclosed in the interlabial pad comprises a folding guide element along said symmetric axis.

10 8. An interlabial pad according to claim 7, wherein said folding guide element is comprised of any of a broken line, a cut line, and a compression line.

15 9. An interlabial pad according to claim 1 or 2, further comprising a long protruding area along said symmetric axis, in using the pad, each fingertip of two fingers of the wearer is respectively inserted into said pair of fingertip insert openings, thereafter the pad is folded at said symmetric axis to be subject to use in a condition that said long protruding area is further projected.

10. An interlabial pad according to claim 9, wherein said long protruding area is formed by bending said symmetric axis.

11. An interlabial pad according to claim 1 or 2, wherein said interlabial pad is used together with a sanitary napkin.

20 12. An interlabial pad according to claim 1 or 2, wherein said interlabial pad is an interlabial pad for incontinence of urine.

13. An interlabial pad according to claim 1 or 2, wherein said interlabial pad is an interlabial pad for absorbing vaginal discharge.

25 14. A wrapping body comprising:  
an interlabial pad according to claim 1 or 2; and  
a wrapping container to contain said interlabial pad,  
wherein the interlabial pad is contained such that said pair of fingertip

insert openings are positioned at the neighborhood of an unseal portion of said wrapping container.

15.A wrapping body according to claim 12, comprising:

the interlabial pad according to any one of claims 1 to 13 and

5 a wrapping container to contain said interlabial pad,

wherein said interlabial pad is folded in a mountain folded shape toward a body side along said symmetric axis and is contained in said wrapping container.
